Digital Transformation Skills

Feb – Mar 2019

Andy Moore (SX) & Julia Teale (SDT)

Digital Transformation: What is the LEP Bid?

Skills Growth Funding

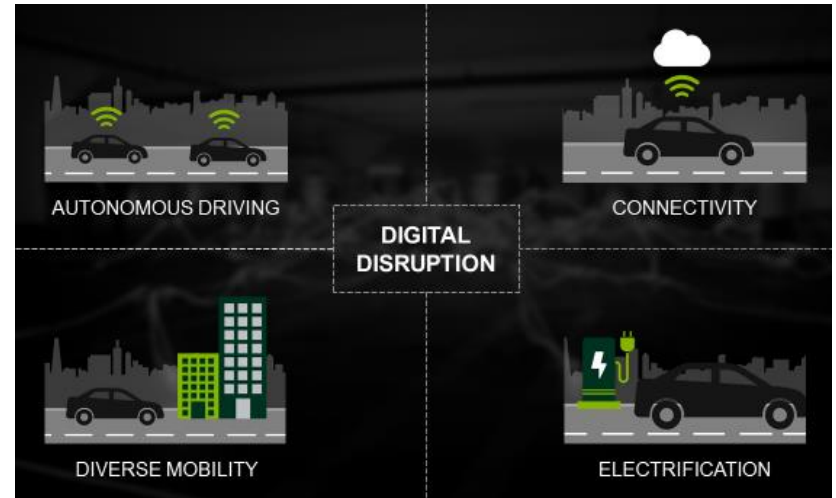

- LEP, Employers & Chester University

£30 million available

- 19,000 employee reach across Cheshire & Warrington (cross employer training opportunities must be identified – must not be specific to Bentley Motors)
- Training should be industry agnostic, as need will be common and there are additional benefits to cross-sector collaboration in training.
- Builds depth of talent pool for the region.

Digital Transformation: The Challenge

- The automotive industry, as many other industries, is facing disruption from a number of different areas underpinned by digital technology. It will affect all areas of the business.
- As a traditional company, we recognise we need to both upskill existing employees and attract new talent with digital skills.
- Access to training programs, at multiple levels of depth from basic awareness to deep understanding, is vital.
- There needs to be a depth to the talent pool, as we will not be alone in requiring these skill sets in the future.

Digital Transformation: Bentley Response

Digital skills audit

1. Assess which skills will be needed to support digital transformation

Hierarchy of understanding

2. Define levels of expertise required, from awareness to deep understanding.

Capability Heat map

3. Map immediate and future requirements, based on horizon scanning across the business, against the skills and levels. Repeat regularly.

Recruit and upskill

4. Plan recruitment and training plans to respond to the heat map.
New training materials will be required, as well as developing a new talent pipeline.

Industry 4.0

2. Hierarchy of understanding & the skills gap

3. Capability heatmap

- Completed Q4-2018 to define 2019 recruitment and training requirement.
 - PhD level x3
 - Digital Apprentices x12
 - Internal training requirements (upskill and awareness)

EXAMPLE

Industry 4.0

Additive Manufacturing (AM) – Pyramid within a Pyramid

- Software: design for AM
- Hardware: limits of kit
- Creative vs technical

Training Type	Need	Volume	Source
PHD or expert level qualification	Up-to-date, ready to implement new solutions	1-2 @ Bentley	KTP or CASE with leading University
College or apprenticeship level qualification	Hands on experience in popular and Bentley specific programming	3-4 @ Bentley (upskill + new talent)	Recognised qualification delivered by training partner
Short course on material capability, design guidelines	Understanding of process, awareness of potential application	20-30 @ Bentley	Local training partner
eLearning	Overview of AM, benefits and limitations	500-1,000 @ Bentley	Industry standard material, hosted on eAcademy

Any kit elements?

Access to basic design tools (PC + Autodesk software) and AM desktop printing machines. Training material to inform and inspire, including hands-on exercises to spark creativity,

Additive Manufacturing (AM) – Capability Network

Bentley

Objective: Identify internal centre of competence, and network across all business areas. Inspire new applications, and link technology as potential solution to existing challenges.

Academia

Objective: Collaborate with leading academic institutions to develop training material and programmes, access thought leadership, and understand state-of-the-art and future potential.

Catapult

Objective: Build relationships with Research & Technology Organisations, such as Government funded Catapults, to leverage latest technology and develop proof of concepts.

Industry

Objective: Collaborate with industry (cross-sector) to share best practice, and raise awareness of cutting edge technology.

Talent

Objective: Partner with local and regional schools to inspire next generation of talent. Link to apprentice recruitment programmes and recruitment fairs.
